

Informed consent

Informed Consent

You are invited to participate in a research study being conducted by Stephanie Anglin (Carnegie Mellon University) and John Edlund (Rochester Institute of Technology). The purpose of this survey is to examine what topics are taught in different psychology courses.

Procedures

Participation will involve answering questions about the psychology courses you taught in the past year, the topics you taught in those courses, and your views on those topics. You will also be asked to complete some demographic questions. The study should take approximately 15-20 minutes to complete.

Participant Requirements

Participation in this study is limited to individuals age 18 and older who have taught psychology courses in the past year at the college level (undergraduate and/or graduate courses).

Risks

The risks and discomfort associated with participation in this study are no greater than those ordinarily encountered in daily life or during other online activities. Nonetheless, some participants may become bored during the research or might not enjoy some aspects of the study.

Benefits

There are no direct benefits to participating in this research. However, you may benefit indirectly by: (1) reflecting on the topics you teach in your courses and your views on various topics, and (2) considering topics to add to or remove from your curriculum.

Compensation & Costs

As compensation for your participation, you will have the opportunity to enter your name in a raffle to win a \$100 Amazon gift card. Your name and contact information will not be recorded in the data file or connected with your responses. There will be no cost to you if you participate in this study.

Confidentiality

Your consent form will be stored in a secure location and will not be disclosed to third parties. Sharing of data with other researchers will only be done in such a manner that you will not be identified. By participating, you understand and agree that the data and information gathered during this study may be used by Carnegie Mellon and published and/or disclosed by Carnegie Mellon to others outside of Carnegie Mellon. However, your name, address, contact information and other direct personal identifiers will not be mentioned in any such publication or dissemination of the research data and/or results by Carnegie Mellon. Note that per regulation all research data must be kept for a minimum of 3 years.

Right to Ask Questions & Contact Information

If you have any questions about this study, you should feel free to ask them by contacting the Principal Investigator now at: Stephanie Anglin, Department of Social and Decision Sciences, 5000 Forbes Avenue, Pittsburgh, PA, 15213, sanglin@andrew.cmu.edu. If you have questions later, desire additional information, or wish to withdraw your participation please contact the Principal Investigator by mail, phone or e-mail in accordance with the contact information listed above.

If you have questions pertaining to your rights as a research participant; or to report concerns to this study, you should contact the Office of Research integrity and Compliance at Carnegie Mellon University. Email: irb-review@andrew.cmu.edu. Phone: 412-268-1901 or 412-268-5460.

Voluntary Participation

Your participation in this research is voluntary. You may discontinue participation at any time during the research activity.

	Yes	No
I am age 18 or older.	☐	☐
I have taught at least one undergraduate or graduate psychology course in the past year.	☐	☐
I have read and understand the information above.	☐	☐
I want to participate in this research and continue with the survey.	☐	☐

courses taught in past year

In the past year, I have taught: (check all that apply)

Introductory Level (e.g., 100 & 200 level) Undergraduate Psychology Course(s)

Advanced Level (e.g., 300 & 400 level) Undergraduate Psychology Course(s)

Graduate Level Psychology Course(s)

intro undergrad course selection

Please select one of the introductory level (e.g., 100 & 200 level) undergraduate psychology courses you taught in the past year and enter the course title below.

advanced undergrad course selection

Please select one of the advanced level (e.g., 300 & 400 level) undergraduate psychology courses you taught in the past year and enter the course title below.

grad course selection

Please select one of the graduate level psychology courses you taught in the past year and enter the course title below.

Instructions

In this survey, you will be asked some questions about the course(s) you selected. Please answer these questions about the most recent time you taught each course in the past year.

intro undergrad teaching

You indicated that you taught the introductory undergraduate psychology course, \${q://QID3/ChoiceTextEntryValue}. In the past year, when teaching this course, which of the following did you discuss?

(Note: These topics may not be relevant to your course or may be too advanced for your course. We are simply interested in performing a descriptive analysis of how frequently these topics are discussed in various kinds of courses).

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Data fabrication/falsification	☐	☐	☐	☐
Plagiarism	☐	☐	☐	☐
The importance of replication as a research methodology	☐	☐	☐	☐
How commonly (or uncommonly) replication studies are performed in psychology	☐	☐	☐	☐
Recent publicized failures to replicate studies in psychology (e.g., Nosek et al., 2015)	☐	☐	☐	☐
Current debates on the problem of replication in psychology (e.g., Gilbert et al., 2015)	☐	☐	☐	☐
The tone of discussions surrounding replication and reform in psychology (e.g., use of civil discourse vs. personal attacks)	☐	☐	☐	☐
	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Pre-registration (specifying sample size, materials, procedures, hypotheses, and plans for data analysis prior to data collection or analysis)	☐	☐	☐	☐
Open access to study materials	☐	☐	☐	☐
Open access to data files	☐	☐	☐	☐
Selective reporting (e.g., failing to report all conditions of a study, all data exclusions, or all dependent measures relevant to the research hypothesis)	☐	☐	☐	☐

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
P-hacking (performing multiple statistical tests of the same hypothesis and reporting only those that produce the desired result(s))	☐	☐	☐	☐
Reporting post hoc explanations for research findings as predicted, a priori hypotheses (i.e., HARKing or "Hypothesizing after the results are known")	☐	☐	☐	☐
How researchers determine their sample size	☐	☐	☐	☐

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Statistical power	☐	☐	☐	☐
Effect size	☐	☐	☐	☐
Overclaiming (i.e., overstating or exaggerating research findings)	☐	☐	☐	☐
Generalizability (whether the results of a study apply in different contexts or populations than those in the original study)	☐	☐	☐	☐
Use of WEIRD samples (Drawn from Western, educated, industrialized, rich, democratic societies)	☐	☐	☐	☐
Publication bias (i.e., publication decisions based on the direction or significance of the findings; the "file-drawer problem")	☐	☐	☐	☐
Political bias (the influence of political beliefs or values on research design and interpretation)	☐	☐	☐	☐

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Theoretical bias (the influence of theoretical preferences on research design and interpretation)	☐	☐	☐	☐
Political homogeneity in academic psychology	☐	☐	☐	☐
The pressure to publish in academia	☐	☐	☐	☐
Authorship and authorship order decisions	☐	☐	☐	☐
The concept of scientific uncertainty	☐	☐	☐	☐
Alternative explanations for research findings (a different explanation than offered by the researchers)	☐	☐	☐	☐

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Conflicting evidence in the literature ("debates" between various researchers)	☐	☐	☐	☐

In the past year, when teaching the introductory undergraduate course \${q://QID3/ChoiceTextEntryValue}, did you generate your own example data for a class demonstration (i.e., simulated data to support/not support a hypothesis)?

Yes

No

Please explain how you generated your own example data for a class demonstration.

In the past year, when teaching the introductory undergraduate course \${q://QID3/ChoiceTextEntryValue}, did you allow students to generate their own example data for a class project (i.e., simulated data to support/not support a hypothesis)?

Yes

No

Please explain how students generated their own example data for a class project.

advanced undergrad teaching

You indicated that you taught the advanced undergraduate psychology course, \${q://QID7/ChoiceTextEntryValue}. In the past year, when teaching this course, which of the following did you discuss?

(Note: These topics may not be relevant to your course or may be too advanced for your course. We are simply interested in performing a descriptive analysis of how frequently these topics are discussed in various kinds of courses).

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Data fabrication/falsification	☐	☐	☐	☐
Plagiarism	☐	☐	☐	☐
The importance of replication as a research methodology	☐	☐	☐	☐
How commonly (or uncommonly) replication studies are performed in psychology	☐	☐	☐	☐
Recent publicized failures to replicate studies in psychology (e.g., Nosek et al., 2015)	☐	☐	☐	☐
Current debates on the problem of replication in psychology (e.g., Gilbert et al., 2015)	☐	☐	☐	☐
The tone of discussions surrounding replication and reform in psychology (e.g., use of civil discourse vs. personal attacks)	☐	☐	☐	☐

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Pre-registration (specifying sample size, materials, procedures, hypotheses, and plans for data analysis prior to data collection or analysis)	☐	☐	☐	☐
Open access to study materials	☐	☐	☐	☐
Open access to data files	☐	☐	☐	☐
Selective reporting (e.g., failing to report all conditions of a study, all data exclusions, or all dependent measures relevant to the research hypothesis)	☐	☐	☐	☐
P-hacking (performing multiple statistical tests of the same hypothesis and reporting only those that produce the desired result(s))	☐	☐	☐	☐
Reporting post hoc explanations for research findings as predicted, a priori hypotheses (i.e., HARKing or "Hypothesizing after the results are known")	☐	☐	☐	☐

Generalizability (whether the results of a study apply in different contexts or populations than those in the original study)	☐	☐	☐	☐
Use of WEIRD samples (Drawn from Western, educated, industrialized, rich, democratic societies)	☐	☐	☐	☐
Publication bias (i.e., publication decisions based on the direction or significance of the findings; the “file-drawer problem”)	☐	☐	☐	☐
Political bias (the influence of political beliefs or values on research design and interpretation)	☐	☐	☐	☐
Theoretical bias (the influence of theoretical preferences on research design and interpretation)	☐	☐	☐	☐
Political homogeneity in academic psychology	☐	☐	☐	☐
The pressure to publish in academia	☐	☐	☐	☐
Authorship and authorship order decisions	☐	☐	☐	☐
The concept of scientific uncertainty	☐	☐	☐	☐
Alternative explanations for research findings (a different explanation than offered by the researchers)	☐	☐	☐	☐
Conflicting evidence in the literature (“debates” between various researchers)	☐	☐	☐	☐

In the past year, when teaching the advanced undergraduate course

{q://QID7/ChoiceTextEntryValue}, did you generate your own example data for a class

demonstration (simulated data to support/not support a hypothesis)?

Yes

No

Please explain how you generated your own example data for a class demonstration.

In the past year, when teaching the advanced undergraduate course
\${q://QID7/ChoiceTextEntryValue}, did you allow students to generate their own example
data for a class project (i.e., simulated data to support/not support a hypothesis)?

Yes

No

Please explain how students generated their own example data for a class project.

grad teaching

You indicated that you taught the graduate psychology course,
\${q://QID8/ChoiceTextEntryValue}. In the past year, when teaching this course, which of the
following did you discuss?

(Note: These topics may not be relevant to your course or may be too advanced for your
course. We are simply interested in performing a descriptive analysis of how frequently these
topics are discussed in various kinds of courses).

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively
Data fabrication/falsification	☐	☐	☐	☐

	Did not discuss	Discussed briefly	Discussed in moderate depth	Discussed extensively

The concept of scientific uncertainty	☐	☐	☐	☐
Alternative explanations for research findings (a different explanation than offered by the researchers)	☐	☐	☐	☐
Conflicting evidence in the literature (“debates” between various researchers)	☐	☐	☐	☐

In the past year, when teaching the graduate course \${q://QID8/ChoiceTextEntryValue}, did you generate your own example data for a class demonstration (simulated data to support/not support a hypothesis)?

Yes

No

Please explain how you generated your own example data for a class demonstration.

In the past year, when teaching the graduate course \${q://QID8/ChoiceTextEntryValue}, did you allow students to generate their own example data for a class project (i.e., simulated data to support/not support a hypothesis)?

Yes

No

Please explain how students generated their own example data for a class project.

reform

How much change do you believe is needed in psychology research on each of the following?

	No change is needed	Some small changes are needed	Moderate changes are needed	Significant changes are needed
Detecting and preventing data fabrication/falsification	☐	☐	☐	☐
Detecting and preventing plagiarism	☐	☐	☐	☐
Increasing the replicability of research findings	☐	☐	☐	☐
Increasing the number of replication studies performed	☐	☐	☐	☐
Providing dedicated journal space to publish the results of replication studies	☐	☐	☐	☐
Increasing pre-registration (specifying sample size, materials, procedures, hypotheses, and plans for data analysis prior to data collection or analysis)	☐	☐	☐	☐
Increasing open access to study materials	☐	☐	☐	☐

	No change is needed	Some small changes are needed	Moderate changes are needed	Significant changes are needed
Increasing open access to data files	☐	☐	☐	☐
Encouraging the use of badges (pre-registration, open data/materials) in publishing	☐	☐	☐	☐
Requiring the use of badges (pre-registration, open data/materials) in publishing	☐	☐	☐	☐
Empirically testing the effectiveness of policies and practices implemented to improve the replicability of research findings	☐	☐	☐	☐
Increasing the civility of the tone of discussions surrounding replication and reform	☐	☐	☐	☐
Increasing transparency in reporting (e.g., stating whether all conditions of a study, all data exclusions, and all dependent measures relevant to the research hypothesis were reported)	☐	☐	☐	☐
Reducing p-hacking (performing multiple statistical tests of the same hypothesis and reporting only those that produce the desired result(s))	☐	☐	☐	☐
	No change is needed	Some small changes are needed	Moderate changes are needed	Significant changes are needed
Explicitly identifying which hypotheses and analyses were a priori vs. post hoc/exploratory	☐	☐	☐	☐
Reporting how samples sizes were determined prior to (or after) beginning data analysis	☐	☐	☐	☐
Increasing statistical power	☐	☐	☐	☐
Reporting effect sizes for all statistical tests	☐	☐	☐	☐
Accurately discussing the strength of effects based on the observed findings	☐	☐	☐	☐
Accurately reporting the generalizability of research findings (whether the results of a study apply in different contexts or populations than those in the original study)	☐	☐	☐	☐

	No change is needed	Some small changes are needed	Moderate changes are needed	Significant changes are needed
Using more diverse samples from non-WEIRD (i.e., non-Western, educated, industrialized, rich, democratic) societies	☐	☐	☐	☐
Reducing publication bias (i.e., publication decisions based on the direction or significance of the findings; the “file-drawer problem”)	☐	☐	☐	☐
Reducing political bias (the influence of political beliefs or values on research design and interpretation)	☐	☐	☐	☐
Reducing theoretical bias (the influence of theoretical preferences on research design and interpretation)	☐	☐	☐	☐
Increasing political diversity in academic psychology	☐	☐	☐	☐
The pressure to publish in academia at the expense of conducting rigorous research and generating valid knowledge	☐	☐	☐	☐
Restructuring the incentive systems in academia to promote rigorous and transparent research	☐	☐	☐	☐
Increasing communication about authorship decisions	☐	☐	☐	☐
	No change is needed	Some small changes are needed	Moderate changes are needed	Significant changes are needed
Discussing scientific uncertainty when communicating research findings to the public	☐	☐	☐	☐
Discussing alternative explanations for research findings	☐	☐	☐	☐
Discussing conflicting evidence in the literature (“debates” between various researchers)	☐	☐	☐	☐

demographics

What is your total course teaching load per year (excluding student advising and research supervision)?

How many undergraduate research assistants do you typically supervise per year?

How many undergraduate student independent research projects do you typically advise per year?

How many graduate student researchers do you typically advise per year?

What was the class size for the introductory undergraduate psychology course, $\{q://QID3/ChoiceTextEntryValue\}$, you taught in the past year?

What was the class size for the advanced undergraduate psychology course, $\{q://QID7/ChoiceTextEntryValue\}$, you taught in the past year?

What was the class size for the graduate psychology course, $\{q://QID8/ChoiceTextEntryValue\}$, you taught in the past year?

Excluding service, what is the focus of your academic position?

Only on teaching

Primarily on teaching

About equally on research and teaching

Primarily on research

Only on research

What percentage of your work time do you spend on each of the following activities?

Teaching	0 %
Research	0 %
Service	0 %
Other	0 %
Total	0 %

Where is the college/university where you work located?

State

Country

What is your primary specialty/area of study? (you may check multiple if your specialty is evenly divided)

Biological Psychology or Neuroscience

Clinical or Counseling Psychology

Cognitive Psychology

Community, School, or Applied Psychology

Cultural Psychology

Developmental Psychology

Evolutionary Psychology

Health Psychology

Industrial/Organizational Psychology

Personality Psychology

Social Psychology

Quantitative Psychology

Other (please specify):

What is your current position?

Graduate student

Post doc

Assistant Professor

Associate Professor

Full Professor

Visiting Assistant Professor

Adjunct Professor

Other (please specify):

What is your most advanced degree?

In what year did you receive your highest degree?

How many years have you been teaching psychology at the college level?

comments

Please provide any comments you have below.

end of study message

Thank you for participating in this study!

If you would like to have your name entered in a raffle to win one of three \$100 Amazon gift cards, please email your name and preferred contact information to:

teachingpsychologysurveyraffle@gmail.com

Your name and contact information will not be recorded in the data file or connected with your responses.
